sequence search

Hi! I'd like to request a sequence search for case 09/686,020:

1. the amino acid sequence of SEQ ID NO: 2

Thanks!

ළිridget Bunner

PROBABLE MEDIATOR OF EBV EFFECTS ON B LYMPHOCYTES OR OF NORMAL LYMPHOCYTE FUNCTIONS. SUBCELLULAR LOCATION: Integral membrane protein.
TISSUE SPECIFICITY: EXPRESSED IN VARIOUS LYMPHOID TISSUES AND ACTIVATED B AND T LYMPHOCYTES, STRONGLY UPREGULATED IN B CELLS INFECTED WITH EPSTEIN-BARR VIRUS AND T CELLS INFECTED WITH HERPESVIRUS 6 OR 7.
INDUCTION: BY EBV.
                                                                                                                                                                                                                                                                                                                                                                                SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.

-I- FUNCTION: HIGH AFFINITY RECEPTOR FOR THE C-C TYPE CHEMOKINES TARC/SCYA17 AND MOC/SCYA27. THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY G(I) PROTEINS WHICH ACTIVATE A PHOSPHATIDYLINOSITOL-CALCIUM SECOND MESSENGER SYSTEM. CAN FUNCTION AS A CHEMOATTRACTANT HOMING RECEPTOR ON CIRCULATING MEMORY LYMPHOCYTES AND AS A CORECEPTOR FOR SOME PRIMARY HIV-2 ISOLATES. IN THE CNS, COULD MEDIATE HIPPOCAMPAL NEURON SURVIVAL.
                                                              This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Biol. Chem. 267:16283-16287(1992).

EUNCTION: RECEPTOR TO INTERLEUKIN-8, WHICH IS A POWERFUL RUTTROPHILS CHEMOTACTIC FACTOR. BINDING OF IL-8 TO THE RECEPTOR CAUSES ACTIVATION OF REUTROPHILS. THIS RESPONSE IS MEDIATED VIA A G-PROTEIN THAT ACTIVATE A PHOSPHATIDYLINOSITOL-CALCIUM SECOND MESSENGER SYSTEM. THIS RECEPTOR BINDS TO IL-8 WITH A HIGH AFFINITY

THIS RECEPTOR BINDS TO IL-8 WITH A HIGH AFFIN AND TO GRO/MCSA AND NAP-2 ALSO WITH A HIGH AFFINITY.
SUBCELLULAR LOCATION: Integral membrane protein.
SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
